What is a Project?

Projects are the most efficient way to sell B2B business services. Through Orent's Project system, your firm can sell to multiple businesses at once and access previously inaccessible markets and resources. Successful businesses and service firms on Orent receive a multitude of price and marketing benefits only available through Orent's unique ranking systems.

Project Description:

Your description is where you articulate what type of service your firm is trying to provide. From accounting to web services, Orent offers a wide variety of different projects - so try to be as specific as possible in your explanation. By including pertinent details, future clients will be able to easily identify your company as the one they need. Provide at least the following ideas:

When creating your Project description, it is important to include specific information on...

1. The service being provided.
2. A quick description of your firm.
3. The category the service fits under (Payroll Accounting, Data Analytics, etc.)
4. Include a base-price as well as a price range for the service
5. The number of clients desired

Important extra details for Project creation

*Your firm's name and email is automatically included in the Project Creation window.

*We realize that prices and time structures are not included in the Project description. This is because every client working with your service firm has different needs and different costs. Taking this into account, we determine payment and contract lengths ourselves on a case-by-case basis that reflects the unique situation of every customer.

*Throughout the Project process, we will work with both your business and potential customers to determine the exact kind of payment and contractual obligations necessary.

*We charge a 3% fee on the first 6-month contract that you create with new customers through Orent.

Payment Structure:

      After your firm has published a project on Orent, businesses in need of your service will be able to view your project and potentially sign up. During this process, the businesses receive *Project Reports*: a comprehensive review of your project and firm. After they approve of your project, an e-invoice will be delivered to your firm
